

Sara Bergström - Fullstack Developer
Göteborg | sara.bergstrom@example.com | github.com/sarab-example
(Fictional person, created as demo data for JobMatch AI.)

PROFILE

Fullstack developer with three years of professional experience building web applications in TypeScript, React and Node.js. Enjoys turning vague requirements into well-tested features and mentoring junior colleagues. Comfortable owning a feature from design discussion to production monitoring.

EXPERIENCE

Fullstack Developer, Nordlys Software AB, Göteborg (2023 - present)

- Built and maintained a customer portal in Next.js and TypeScript used by 40,000 monthly users.
- Designed REST and GraphQL APIs in Node.js with PostgreSQL, including schema migrations and indexing.
- Introduced end-to-end tests with Playwright, reducing production bugs reported by support by about 30%.
- Containerized three services with Docker and set up GitHub Actions pipelines for test and deploy.
- Added structured logging and error tracking with Sentry, cutting time-to-diagnose for incidents.
- Mentored two junior developers through weekly pair programming and code reviews.
- Worked in a Scrum team of seven; facilitated retrospectives when the Scrum Master was away.
- Wrote technical documentation and onboarding guides used by new team members.

Junior Developer, Kodverket Konsult AB, Stockholm (2022 - 2023)

- Developed React components for an e-commerce client, focusing on accessibility (WCAG 2.1 AA).
- Wrote integration tests in Jest and fixed performance issues in product listing pages.
- Built an internal admin tool in Python with FastAPI to manage product data imports.
- Took part in client workshops to clarify requirements and estimate work.

Summer Intern, Västra Energi, Göteborg (2021)

- Created dashboards in Power BI and automated weekly Excel reports with Python scripts.

EDUCATION

BSc Computer Science, Chalmers University of Technology, Göteborg (2019 - 2022)

Thesis: Comparing state management approaches in large React applications.

Relevant courses: Algorithms and data structures, Databases, Software engineering project, Web security.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js, Tailwind CSS, accessibility (WCAG)

Backend: Node.js, Express, FastAPI, REST, GraphQL, PostgreSQL, Redis

Tooling: Docker, GitHub Actions, Playwright, Jest, Sentry, Git

Cloud: basic experience with AWS (S3, Lambda) from a hobby project

Ways of working: Scrum, code review, pair programming, trunk-based development

PROJECTS

Recipe Planner (2024): A Next.js app that plans weekly meals and generates shopping lists.

Deployed on Vercel, uses PostgreSQL and has 200 active users among friends and family.

Open source: contributed bug fixes to two React UI component libraries on GitHub.

LANGUAGES

Swedish (native), English (fluent, daily work language), German (basic)

OTHER

Volunteer coding instructor at a local library's "Kodklubben" for teenagers (2023 - present).

Driving licence B.
